# Understanding nonprofit supporters

An original portfolio example for a fictional Oklahoma nonprofit

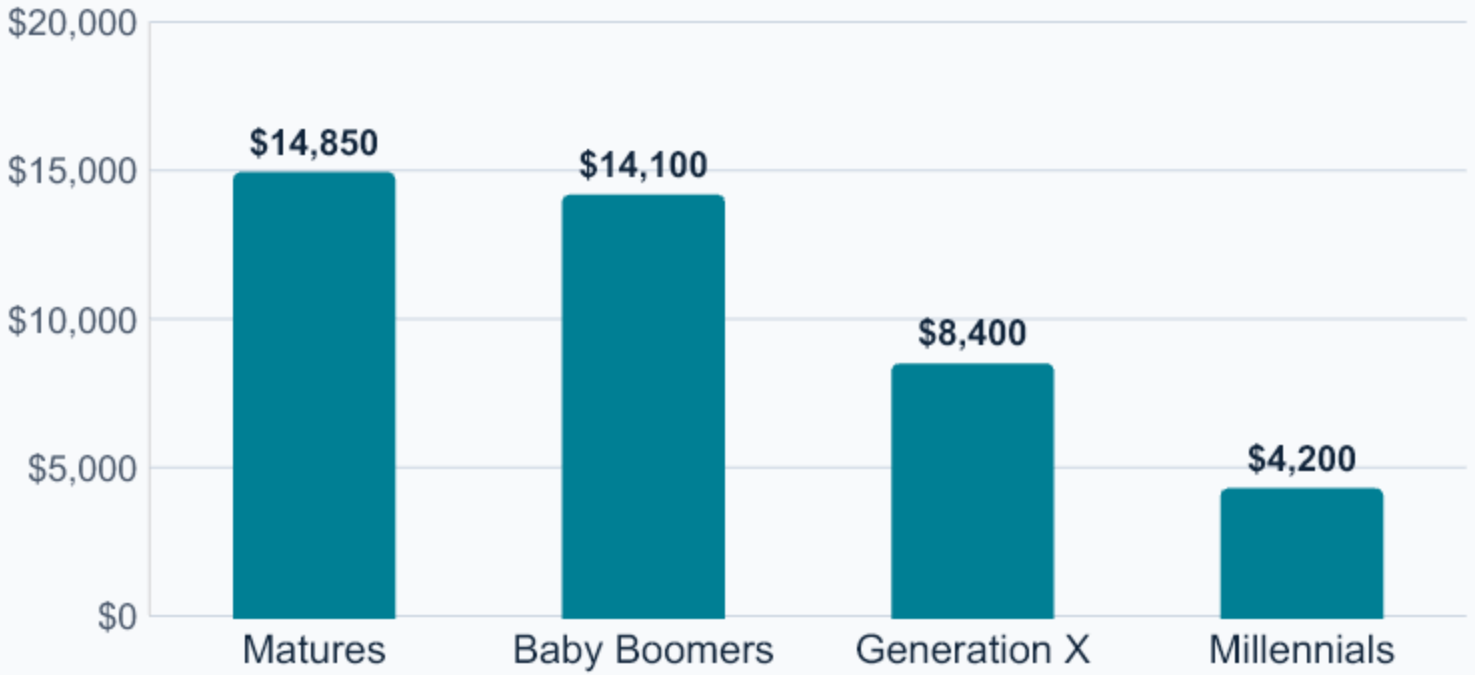

## Who supports us, how is giving changing, and where should we focus outreach?

24 fictional donors. Three years of giving. Clear results for discussion.

No client records, actual fundraising results, or wealth-screening claims.

# Giving by donor generation

2025 giving and donor counts answer different questions

## Six donors in each cohort

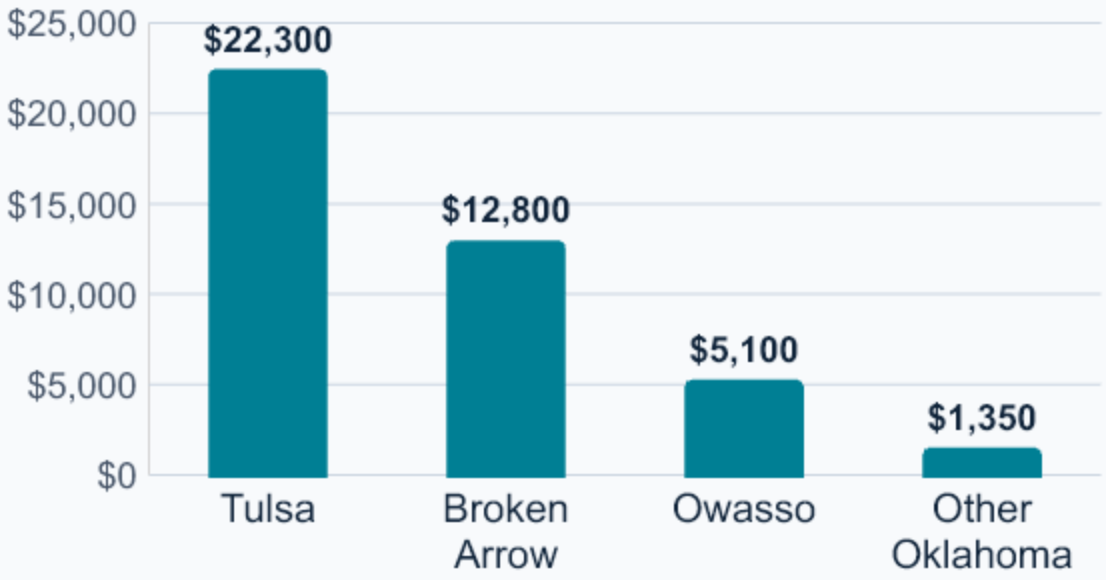

Giving totals differ even though donor counts are equal. Review both before deciding how to engage supporters.

Cohorts use birth years, not inferred wealth or giving capacity.

# Where support comes from

Donor location and acquisition source are separate views of the same 2025 giving

## By donor location

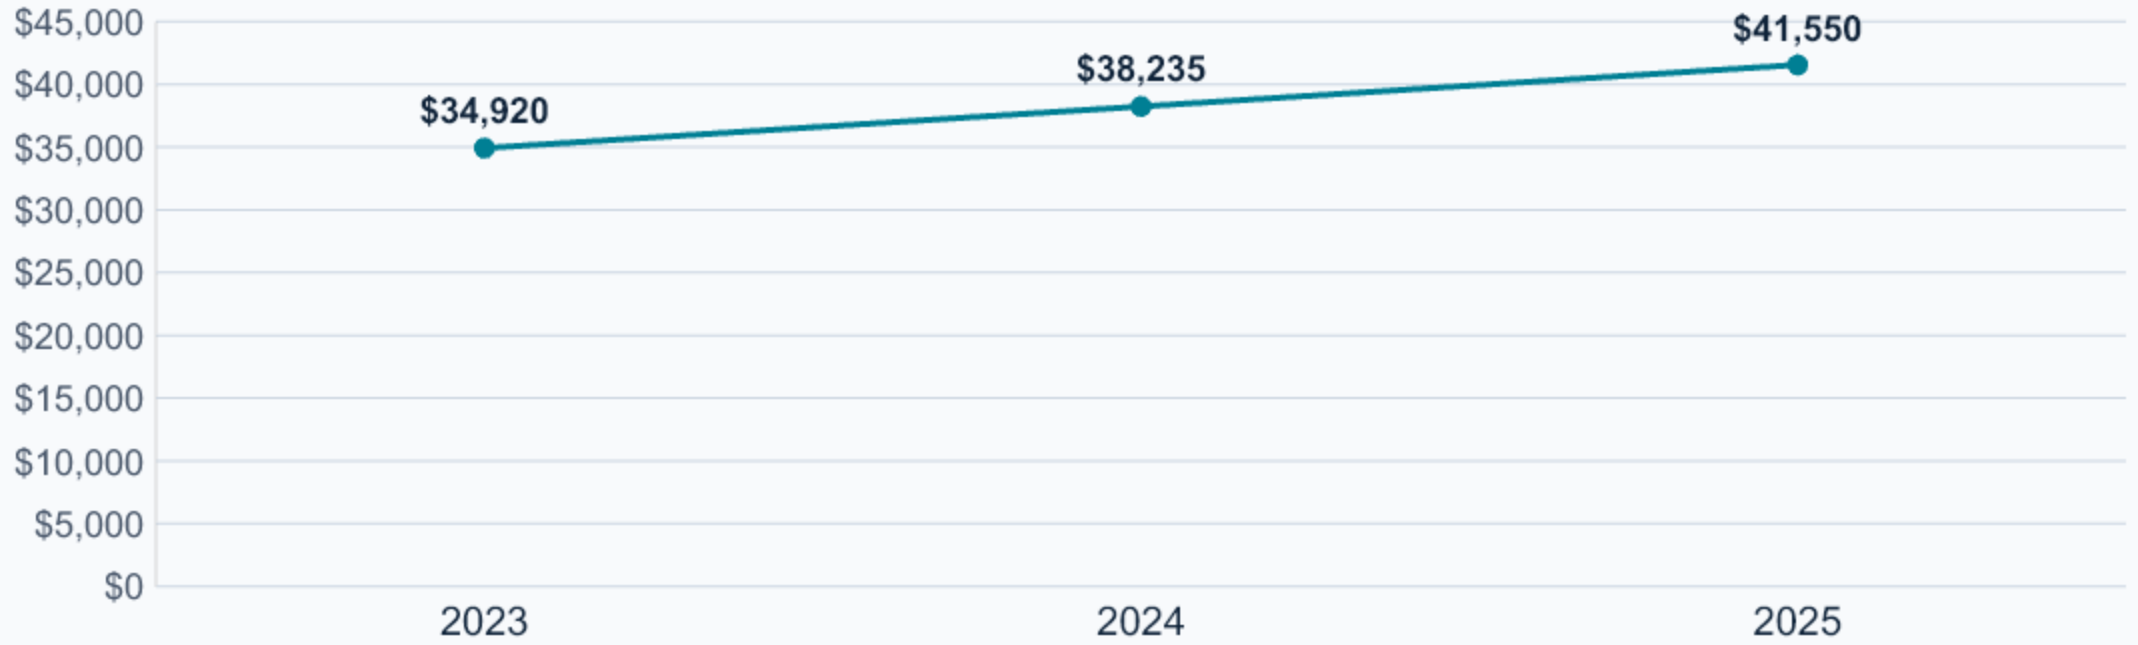

## By acquisition channel

Channel totals do not establish return on investment. Outreach costs and attribution checks are not included.

# Giving over three years

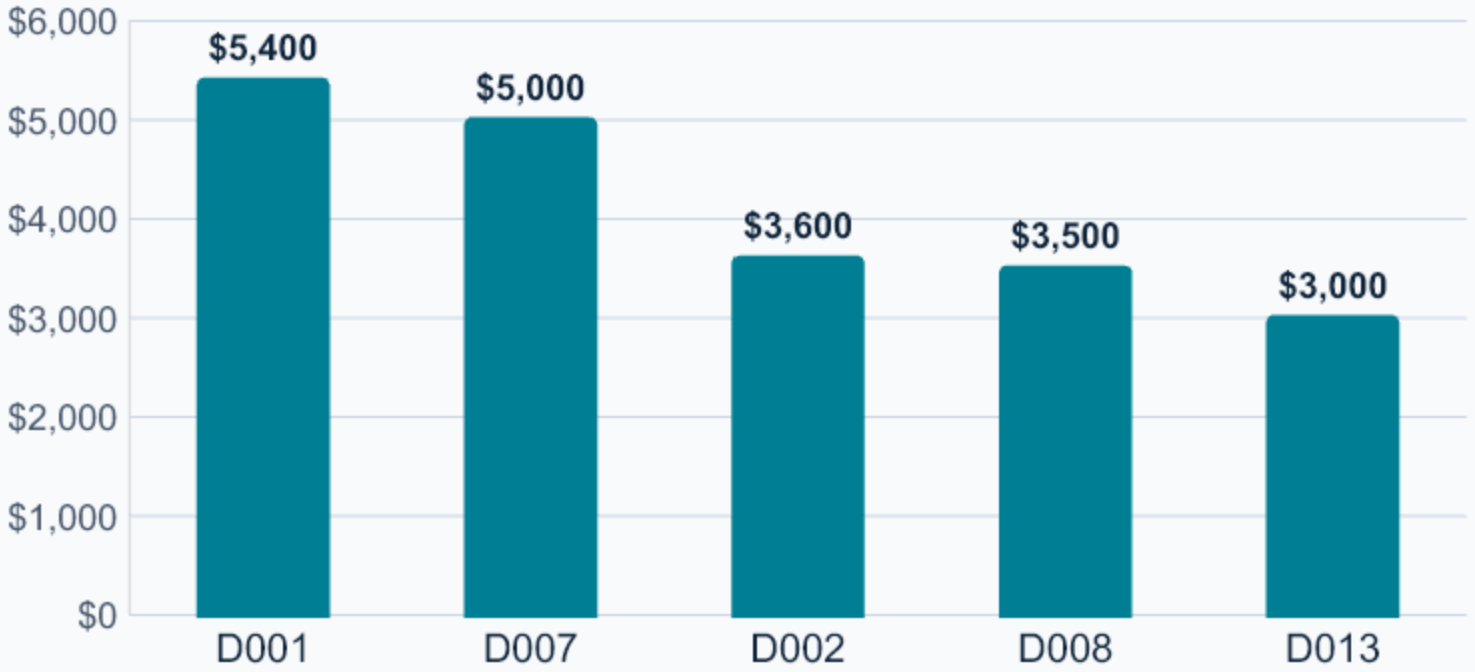

Annual totals rose 19.0% from 2023 to 2025 in this fictional example

The same 24 donors appear in all three years. This demonstrates changes in giving, not donor acquisition or retention.

# The five largest supporters

Five of 24 donors contributed 49.3% of 2025 giving

**$20,500**

Combined 2025 giving from the five largest donors.

A starting point for stewardship planning, not a prediction of future gifts.

# Using the findings to plan outreach

Questions for the next conversation with a nonprofit team

## Steward existing relationships

Review the largest supporters and agree on appropriate personal follow-up.

## Check outreach sources

Compare location and acquisition patterns with outreach costs before shifting resources.

## Investigate changes in giving

Discuss changes with the team before assigning causes or making fundraising forecasts.
